Profile

Data Analyst with strong proficiency in Excel, SQL, and Python, Machine Learning eager to turn complex data into actionable insights. Trained on real-world projects involving data cleaning, visualization, and storytelling using Power BI and Tableau. Fast learner with sharp analytical thinking and a drive to deliver data-driven decisions that add measurable value.

Professional Experience

- DATA ANALYST INTERN, Techolas Technologies** 04/2025 – Present
Calicut
- Assisted in data collection, cleaning, and preprocessing to support analytical projects and business reporting.
 - Created dashboards and visualizations using tools like Excel, Power BI, and Tableau to communicate insights.
 - Collaborated with senior analysts to identify trends and deliver actionable recommendations based on data analysis.

Education

- Diploma in Mechanical Engineering, Government polytechnic college** 2017 – 2020
Manjeri

Skills

Technical Skills

programming languages : Python, SQL
Data Analysis tools : Pandas, Numpy
Visualization : Tableau, power BI, Excel

Soft Skills

- Communication
- Problem solving
- Time management

Languages

- MALAYALAM
- ENGLISH
- HINDI

Projects

Analysing shopping trends; Insights into Modern Customer Behavior. 📄

- Built a dynamic Power BI dashboard to analyze customer purchase behavior by product categories, seasons, and demographics.
- Tools & Skills: Python, Power BI, My SQL, Data Cleaning, Data Visualization.
- Derived actionable insights on purchase frequency, shipping patterns, and payment method distribution, enabling targeted marketing strategies.

Loan Approval Analysis: Evaluating Applicant Behavior Using Machine Learning 📄

- Built a machine learning model to predict loan approval outcomes using customer financial and demographic data.
- Performed end to end data preprocessing including handling missing values, encoding categorical features, scaling, and outlier treatment.

- Trained and evaluated multiple ML algorithms (Logistic Regression, Random Forest, Gradient Boosting and other 4 models) and selected the best performing model.
- Deployed the model through an interactive Streamlit web application for real time loan eligibility prediction.
- Tools & Skills: Python, Pandas, Scikit learn, Streamlit, Git, Jupyter Notebook.

Voter-to-Candidate Complaint Application (Lovable + Supabase)

- Built an AI-generated web application using Lovable to enable citizens to submit complaints directly to their ward candidate.
- Designed role-based access so candidates can log in and view only the complaints associated with their assigned ward.
- Customized auto-generated React + Tailwind components through the Lovable editor to improve user experience and workflow.
- Integrated Supabase backend for authentication, data storage, and secure ward-based filtering.
- Tools & Technologies: Lovable, React (auto-generated), Supabase, Tailwind CSS, TypeScript, GitHub.

Crop Prediction Using Machine Learning

- Developed an ML-based crop recommendation system using soil nutrients and environmental factors.
- Built a RandomForest model after performing EDA, outlier removal, and data preprocessing, and deployed the solution using a Flask web application with a custom HTML/CSS interface for real-time predictions.
